

Keeping your propane or fuel tanks full have always been our priority. We've recently enhanced our list of services to include Winter Protection.

We understand the importance of protecting your home and property during the winter months. A number of disasters can occur due to extreme temperatures.

Our Winter Protection Service features a number of monitoring and detection options that send alerts in the event that your home and property is threaten by winter conditions.

We strive to deliver peace of mind for our valued customers. Protecting your home the whole year-round enables us to deliver on that promise.

## Protecting Your Home and Property from Winter Disasters

**FROZEN PIPES & LEAKS**

**WATER HEATER LEAKS & FLOODING**

**FURNANCE BURNER LOCK-OUTS**

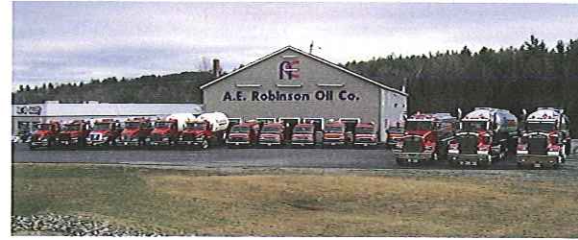

**GENERATOR FAILURES**

**UNSUITABLE TEMPERATURES**

**POWER OUTAGES**

Our delivery team is here for you 24 hours a day, seven days a week; whether it be residential or commercial service, our customer satisfaction is our number one priority. We offer automatic delivery to help our customers have one less thing to worry about in their busy schedules. Peace of mind is a commodity these days, and we're proud to offer such a service to you. For those of you who prefer to call in their order or pay upon delivery, we can accommodate these preferences as well! On top of our standard product line of oil, propane, and diesel fuel, we also deliver pellets and BioBricks (an environmentally safe wood) upon request.

# Winter Protection for **Your Home and Property**

**8** monitor up to eight assets

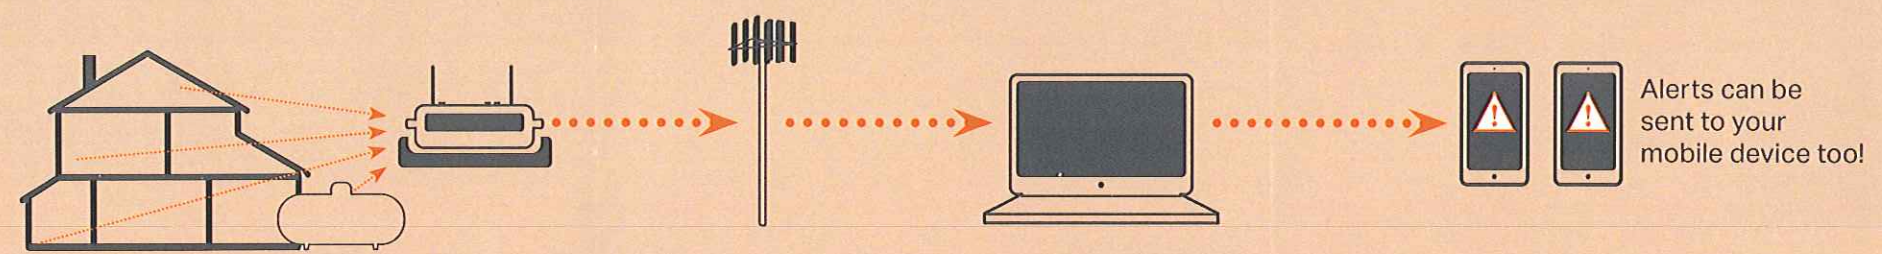

In addition to keeping your fuel or propane tanks filled throughout the year, we also offer winter protection services for your seasonal home. We simply add a transmitter to any of the home assets seen below, then sync its information into your existing monitored tank-level data.

## MONITOR AND DETECT ANY OF THE FOLLOWING:

- fluid levels of almost any tank
- temperature of any asset, wet or dry
- water presence (wet or dry)
- binary alerts (asset is working or not working)

## How It Works

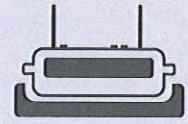

Each monitored home asset sends its data or alert to a base unit, where it can be viewed using the interactive display features.

The base unit relays the data and any alerts through a cellular network via a secure connection.

We view and monitor the status of your assets along with the tank-level information on your propane or fuel tank.

Any alerts are sent to our team instantly so we are able to respond and take the appropriate actions quickly.

## The Monitoring Equipment

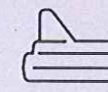

**Base Unit**  
The base unit receives and displays information from each transmitter set up in your home. The device can sync with up to eight transmitters. It also relays the data to our monitoring software.

**Water Transmitters**  
These wireless transmitters are placed on, or near various assets in your home and alert to the presence of water, ideal for protecting against leaks.

**Temperature Transmitters**  
This transmitter is designed to monitor temperatures of assets such as refrigerators, freezers, wine cellars, or general room temperatures.

**Tank Level Monitors**  
Tank level monitors connect to gauges on various types of tanks and report the level of the tanks to the base unit.

We trust only the best monitoring equipment with our customer's home. WESROC® tank monitors are American made, and the most reliable in the industry.
